Principal investigators: Antoine Bilodeau, The Australian National University

David Denemark, University of Western Australia
Mark Western, University of Queensland

Sample type: The sample was stratified by Australian states and territories using population counts based on Australian Electoral Commission (AEC) statistics as at 29th July 2005. The selection of individuals within the stratified sample was random using the Electoral Roll for Australia produced by the AEC. This frame includes all registered voters who must be citizens of Australia (or a British subject on a Commonwealth electoral roll as at 25 January 1984). Since voting in Australia is compulsory, there is a very high proportion of the adult Australia population covered by this frame—approximately 92 percent in 2003.

A systematic random sample from each state and territory list was drawn by taking every *n*th name starting with a random start point of size proportional to the population of registered voters. The sampled units were named individuals.

Gross sample

Using a sampling frame derived from the AEC Electoral Roll (2005) excludes permanent and temporary residents of Australia (who are not citizens) and any other adults in Australia who are non-citizens except for British subjects on a Commonwealth electoral roll as at 25 January 1984. These exclusions amount to approximately 8 percent of the adult population.

Net sample

The sample demographics were compared with statistics available from the Australian Bureau of Statistics (ABS) including the 2001 Census. The major biases are: age (median age is older than the Census population), education (over-representation of persons with post-secondary school qualifications), and gender (slight over-representation of women).

Sample type:

1. 104 interviewers worked in 150 clusters (census sectors of IBGE, the Brazilian organ responsible by population statistics in our country), 28 rural and 122 urban, in 119 counties.
2. 19 sub-coordinators were responsible by regions around the country.
3. Interviewers followed instructions of “Manual do Entrevistador” (Interviewer Manual – see annex, in Portuguese).
4. Seven clusters were substituted by similar ones, due to impossibility of accessing because: 1) in Amazonic region one county was accessible only by boat and in rare days (one case); 2) access roads with no conditions for traffic (two cases); 3) rich population in high criminality locations at big cities forbade interviewer entrance (four cases).
5. The substitutive clusters were randomly selected in the same county, maintaining the situation, urban or rural.
6. In some regions, mostly rural, a bigger concentration than expected of female population occurred, due to bigger literacy among women in Brazil.

Fieldwork Institute:

Universidad de Brasilia

Fieldwork methods:

1. The field supervision was fixed to 20% of each interviewer work. However, the supervision reached 16% of questionnaires, in average. Most of it due to difficulties of accessing clusters or interviewed people.
2. One interviewer’s work was rejected because he didn’t observe the inclusion criterion. It was remade in the same cluster.
3. A specific computer software was developed to enter the data. Four people were hired to do the data entering. An extensive checking was made to assure data quality, including logical criticism. In 10% of questionnaires the data entering was completely checked, and very few mistakes were found.

Sample type:

The sample was designed to represent the national population of voting age by: region, type of residence, gender, age and ethnicity.

Universe was stratified by regions (28 in total);

- lists of election precincts in each of the regions was prepared containing the number of persons aged 18+ in each precinct;

- given the targeted size of the final sample (1000), the number of individuals to be interviewed in each region was determined. This size is in direct proportion to the relative share of the respective region within the universe;

Random selection of sampling points to be used in the survey.

The sampling points were chosen to represent regions and type of settlement.

Weighted: Yes

Weighting Procedure: The data was weighted by following categories - gender, age, region, type of settlement, ethnicity.

Known Systematic Properties: The random selection of the sampling points was done by means of the following algorithm:

Calculation of the number of clusters to be achieved in each region (number is proportional to the size of the region);

Sampling points in each region arranged in a descending order based on the criterion "number of persons aged 18+ in the cluster". (NB: sampling points, that is, election precincts are comparatively uniform in terms of scale. Each sampling point contains between 400 – 1 000 persons aged 18+.);

A cumulative column was formed by the number of individuals contained in each cluster;

Based on this cumulative column, the systematic selection was achieved of the necessary number of sampling points starting by using a random start-up figure, and then a step was applied for moving down the cumulative column which step is the quotient of the size of the regional sub-universe and the number of respondents in each sampling point.

Weighting and post stratification were done on three major demographic variables, age, gender, and level of education, as following.

Weighting First, calculate probability of every eligible adult to be selected into the sample in each PSU: p_1 ; Second, calculate probability of respondents in each of the PSUs: p_2 ;

Procedure: Third, calculate the weight of each of the respondents:
 $pweight1 = 1/(p_1 * p_2)$, as well as the weight of the sample:
 $pweight2 = 1/p_1$;

The final weight (V259 in the dataset) is obtained from the post-stratification of respondents in terms of age, gender, and level of education based on the 2000 Census data.

-
- 1- The sampling frame is the extended roster of households for the post enumeration survey of the 2006 Census.
 - 2- This frame covered all governorates (except the five frontiers' Governorates hosting about 1.8% of the total population), within about 480 segments (average 100 HH).
 - 3- To reduce sampling error, it was only to select 25 HH from each segment to increase the number of segments selected from each Governorate and that Number of segments was proportional to its size according to the 2006 population census.
 4. Within Governorates, rural/urban parts were represented by selecting separately the number of segments proportional to its population share according to the 2006 census. Overall, a total of 122 segments were selected (out of which 56 from Urban areas and the balance from Rural areas of each Governorate), thus drawing a self-weighted sample for each Governorate based on its share of the 2006 population census.
 5. Both segments were selected separately from the frame of Urban/Rural area for each Governorate using systematic random sampling.
 - 5 - Households were also selected within segments (25 households from each segment) using systematic random sampling.
 - 6 - 6 - Due to rounding, the total number of segments rose to 122 segment, (and the sample size rose to 3050 individuals)

- The sample tended to be biased to females, as they were represented by 62% of the total sample. So weights was computed to modify the distribution of males and females, according to their distribution in the population.

Deviations from WVS-questionnaire:

The original questionnaire (the English version) was translated into Arabic. A back translation was prepared by an independent expert. A pretest was conducted to make sure that questions are understood and are in the proper sequence. The questionnaire was slightly modified according to the results of the pretest.

Language:

Weighted:

Yes

Weighting Procedure:

Respondents were chosen by sex and age quotas.

*Known Systematic
Properties:*

The first stage stratification was based on two dimensions:
1. The North-South dimension grouped the municipalities according to NUTS 2 into three groups: South, Central Finland and Northern Finland
2. Urban-rural dimension was used to form two groups: Urban municipalities and semi-urban and rural municipalities
By linking these two dimensions six primary level strata were obtained. The Capital Region (Helsinki, Espoo, Vantaa, Kauniainen) formed an individual stratum.

The second stage stratification grouped zip code areas within the first stage strata in such a way, that the second stage strata was as homogeneous as possible in terms of socio-economic dimensions. In total there were 16 second stage strata. The mean income in the capital region and proportion of apartment buildings in other regions were used as the stratification variables.

At each first stage stratum the number of starting points was distributed as equally as possible amongst the second stage strata.

Capital region was divided into four second stage strata. Southern Finland was divided into four second stage strata. Central Finland was divided into four second stage strata. Northern Finland was divided into four second stage strata.

The number of sampling points inside each stratum was in a direct relation to the number of inhabitants in each stratum. Therefore proportional allocation was used. Inside each stratum, clusters (zip code areas) was picked using PPS-sampling and inside each picked cluster the same sample size (8 interviews). Inside each sampled cluster a starting point was chosen randomly. From randomly drawn address the interviewers moved towards growing addressnumbers.

Characteristics of National Population:

(Here, population figures by SEX, AGE and EDUCATION are welcome)

Study Description: [France]

Study title: World Values Survey 2005/2006

Fieldwork dates: Between January 30 and February 24, 2006.

Principal investigators:

Sample type: Quota sample according to: gender, age, profession of respondent, region, size of town.

Fieldwork Institute: GfK CUSTOM RESEARCH France, Rueil-Malmaison Cedex

Fieldwork methods: Face-to-face in-home interviews via CAPI (computer assisted personal interviews)

Sample size: 1001

Language: French

Weighted: Yes

Weighting Procedure: During and after data collection, representativeness of the sample with respect to nationally based criteria has been checked. Deviations from the population's distribution on these criteria were observed. These deviations have been corrected by a weighting variable built with the RIM weighting procedure – see the RIM weighting theoretical basis paper entitled 'ON A LEAST SQUARES ADJUSTMENT OF A SAMPLED FREQUENCY TABLE WHEN THE EXPECTED MARGINAL TOTALS ARE KNOWN', by W. Edwards Deming and Frederick F. Stephan, in volume 11, 1940 of the Annals of Mathematical Statistics. It was realised with Quantum software of SPSS MR company.

Known Systematic Properties:

Quota relevant questions and questions necessary for statistical reasons had been asked at the beginning of the interview. Here the actual order:

Statistical questions: Interview number, date of contact, type of contact, comments, number of quota sheet

Quota relevant questions: Region ZEAT, commune, size of town, v235, v236, v237, v241, v241_1 (if people are currently not working, they had been asked, if they had a job in the past), v242,

**Deviations from
WVS-questionnaire:**

Then the order of the WVS questions strictly followed the master questionnaire. No additional questions had been inserted in the programmed questionnaire.

The wording of v34 to v42 and v198 to v208 had been amended, because the original version was likely to offend minorities due to the special situation in France (protests in suburban areas etc.).

After question v256 some additional statistical questions, such as duration of the interview, name and address of respondent were inserted.

Known Systematic Properties:

In order to pick a sample of people living in cities and villages, the stages for sampling selection are:

1. First stage: We begin with selecting a sample of provinces (the primary sampling units are provinces). Because of different numbers of population between Java and Out of Java, we use sample fraction, where 6 provinces for Java and 4 provinces for Out of Java.
2. Second stage: Select a sample of Regencies or Districts within the provinces selected in the first stage (the second-stage sampling units are Regencies or Districts).
3. Third stage: Select a sample of municipalities and sub-districts within the Regencies or Districts selected in the second stage (the third-stage sampling units are Municipalities or sub-districts).
4. Fourth stage: Select a sample of Village within municipalities and sub-districts selected in the third-stage (the fourth-stage sampling units are Village),
5. Fifth stage: Select a sample of blocks within the selected Villages in the fourth-stage
6. Sixth stage: Select a sample of people within the selected families (Households).

Fieldwork Institute: INTOMART GfK, Hilversum

Fieldwork methods: Face-to-face in-home interviews via CAPI (computer assisted personal interviews)

Sample size: 1050

Language: Dutch

Weighted: Yes

Weighting Procedure: During and after data collection, representativeness of the sample with respect to nationally based criteria has been checked. Deviations from the population's distribution on these criteria were observed.

These deviations have been corrected by a weighting variable built with the RIM weighting procedure – see the RIM weighting theoretical basis paper entitled 'ON A LEAST SQUARES ADJUSTMENT OF A SAMPLED FREQUENCY TABLE WHEN THE EXPECTED MARGINAL TOTALS ARE KNOWN', by W. Edwards Deming and Frederick F. Stephan, in volume 11, 1940 of the Annals of Mathematical Statistics. It was realised with Quantum software of SPSS MR company.

Additional criteria used for weighting of the data: size of town
As in most of the countries involved, quota sampling had been used to select the respondents, a brief description of the methodology at the beginning of the methodological report seems to be useful.

Known Systematic Properties:

The respondent was selected using quota selection. Respondents were only selected if they matched the quotas given to the interviewers. Concerning substitution, any respondent fitting an appropriate quota profile could be interviewed instead of somebody with the same quotas, but who did not want to participate in the survey.

Concerning stratification factors, region and size of town were used to design the sample and select appropriate sampling points.

Deviations from WVS-questionnaire:

The order of the questions strictly followed the master questionnaire. No additional questions had been inserted in the programmed questionnaire, not even quota relevant questions. Quota had been recorded by a separate quota sheet.

This weighting variable was included in the data-set.as the variable “Peso”, in order to correct for distortions in the representativeness of the sample according to the information of the 2005 Census.

*Known Systematic
Properties:*

The margin error for this simple is $\pm 2.5\%$.

Pilot Survey allowed to introduce some modifications to the questions, since the World Values Survey has a standard format that was necessary to follow.

Nevertheless, information could be gathered during this stage, approximately in 1 hour to 1 hour and 15 minutes, which allowed to plan organize the fieldwork in terms of number of days and interviewers required for the different regions.

Principal investigators: Tu, Su-hao
Sample type: Center for Survey Research RCHSS, Academia Sinica
Three-stage Stratified PPS Sampling
(1) PSU=township, (2) Li (administrative unit under township, (3) respondent
Fieldwork institute: Center for Survey Research RCHSS, Academia Sinica
Fieldwork methods: Face-to-face interview
Sample size: 2874

Response rates:

2874	A - Total issued (total sample)
90	B - Ineligible (address vacant, wrong ages,...)
2784	C - (= A - B) Total eligible (in scope sample)
1225	D - Total WVS questionnaires received

1076	G - Non-contact (never contacted)
54	H - Other non-response

Language: Mandarin, Taiwanese, or Hakka
Weighted: Yes
Weighting procedure: The data was weighted using an iterative proportional raking scheme. For each respondent, sample data was weighted by sex, age, area and education degree groups. Weights were then generated to match the population of Taiwan area.
Known systematic properties of the sample: A non-response bias comes from the use of household registration data in which some household members in fact do not live in the household.
Deviations from WVS questionnaire: Some variables are not included in the data :
V50-V54, V165-V167, V178, V210-214.

V45: EMPLOYERS SHOULD GIVE PRIORITY TO (NATION) PEOPLE THAN IMMIG

V45. Do you agree, disagree or neither agree nor disagree with the following statements? (Read out and code one answer for each statement):

When jobs are scarce, employers should give priority to [British]* people over immigrants.
Substitute your own nationality for “British”!]

V46: HOW MUCH FREEDOM YOU FEEL

V46. Some people feel they have completely free choice and control over their lives, while other people feel that what they do has no real effect on what happens to them. Please use this scale where 1 means "no choice at all" and 10 means "a great deal of choice" to indicate how much freedom of choice and control you feel you have over the way your life turns out (code one number):

- 5 'Missing; Unknown'

V48: FIRST CHOICE, IF LOOKING FOR A JOB

V48. Now I would like to ask you something about the things which would seem to you, personally, most important if you were looking for a job. Here are some of the things many people take into account in relation to their work. Regardless of whether you're actually looking for a job, which one would you, personally, place first if you were looking for a job (read out and code one answer):

-5 'Missing; Unknown'

-4 'Not asked'

-3 'Not applicable'

-2 'No answer'

-1 'Don't know'

1 'A good income'

2 'A safe job with no risk'

3 'Working with people you like'

4 'Doing an important work'

V96: POLITICAL ACTION: SIGNING A PETITION

V96. Now I'd like you to look at this card. I'm going to read out some forms of political action that people can take, and I'd like you to tell me, for each one, whether you have done any of these things, whether you might do it or would never under any circumstances do it (read out and code one answer for each action):

V107: GOVERNMENT SHOULD REDUCE ENVIRONMENTAL POLLUTION

V107. I am going to read out some statements about the environment. For each one, can you tell me whether you strongly agree, agree, disagree or strongly disagree? (Read out and code one answer for each):

The Government should reduce environmental pollution, but it should not cost me any money.

V115: ONE SECRETARY IS PAID MORE

V115. Imagine two secretaries, of the same age, doing practically the same job. One finds out that the other earns considerably more than she does. The better paid secretary, however, is quicker, more efficient and more reliable at her job. In your opinion, is it fair or not fair that one secretary is paid more than the other? V116: INCOMES MORE EQUAL

V116. Now I'd like you to tell me your views on various issues. How would you place your views on this scale?
1 means you agree completely with the statement on the left; 10 means you agree completely with the statement on the right; and if your views fall somewhere in between, you can choose any number in between. (Code one number for each issue):

Incomes should be made more equal vs. We need larger income differences as incentives for individual effort

V118: GOVERNMENT MORE RESPONSIBILITY

V118. Now I'd like you to tell me your views on various issues. How would you place your views on this scale?
1 means you agree completely with the statement on the left; 10 means you agree completely with the statement on the right; and if your views fall somewhere in between, you can choose any number in between. (Code one number for each issue):

The government should take more responsibility to ensure that everyone is provided for vs. People should take moreresponsibility to provide for themselves

V120: HARD WORK

V120. Now I'd like you to tell me your views on various issues. How would you place your views on this scale?
1 means you agree completely with the statement on the left; 10 means you agree completely with the statement on the right; and if your views fall somewhere in between, you can choose any number in between. (Code one number for each issue):

In the long run, hard work usually brings a better life
vs. Hard work doesn't generally bring success—it's more a matter of luck and connections

- 5 'Missing; Unknown'
- 4 'Not asked'
- 3 'Not applicable'
- 2 'No answer'
- 1 'Don't know'
- 1 'In the long run, hard work usually brings a better life'
- 2 '2'
- 3 '3'
- 4 '4'
- 5 '5'
- 6 '6'
- 7 '7'
- 8 '8'
- 9 '9'
- 10 'Hard work doesn't generally bring success - it's more a matter of luck and connections'

V153: DEMOCRACY: RELIGIOUS AUTHORITIES

INTERPRET THE LAWS.

V153. Many things may be desirable, but not all of them are essential characteristics of democracy. Please tell me for each of the following things how essential you think it is as a characteristic of democracy. Use this scale where 1 means “not at all an essential characteristic of democracy” and 10 means it definitely is “an essential characteristic of democracy” (read out and code one answer for each):

Religious authorities interpret the laws.

V156: DEMOCRACY: THE ARMY TAKES OVER WHEN GOVERNMENT IS INCOMPETENT

V156. Many things may be desirable, but not all of them are essential characteristics of democracy. Please tell me for each of the following things how essential you think it is as a characteristic of democracy. Use this scale where 1 means “not at all an essential characteristic of democracy” and 10 means it definitely is “an essential characteristic of democracy” (read out and code one answer for each):

The army takes over when government is incompetent.

V159: DEMOCRACY: CRIMINALS ARE SEVERELY PUNISHED.

V159. Many things may be desirable, but not all of them are essential characteristics of democracy. Please tell me for each of the following things how essential you think it is as a characteristic of democracy. Use this scale where 1 means “not at all an essential characteristic of democracy” and 10 means it definitely is “an essential characteristic of democracy” (read out and code one answer for each):

Criminals are severely punished.

V160: DEMOCRACY: PEOPLE CAN CHANGE THE LAWS IN REFERENDUMS.

V160. Many things may be desirable, but not all of them are essential characteristics of democracy. Please tell me for each of the following things how essential you think it is as a characteristic of democracy. Use this scale where 1 means “not at all an essential characteristic of democracy” and 10 means it definitely is “an essential characteristic of democracy” (read out and code one answer for each):

People can change the laws in referendums.

V161: DEMOCRACY: WOMEN HAVE THE SAME RIGHTS AS MEN.

V161. Many things may be desirable, but not all of them are essential characteristics of democracy. Please tell me for each of the following things how essential you think it is as a characteristic of democracy. Use this scale where 1 means “not at all an essential characteristic of democracy” and 10 means it definitely is “an essential characteristic of democracy” (read out and code one answer for each):

Women have the same rights as men.

V173: MDG: FIGHT HIV

V173. I'm going to read out another list of global problems, and goals that world leaders have set to reduce them. Indicate for each of these goals how high a priority your own country's leaders should give to it, using this card. (Read out and code one answer for each goal)

NOTE: Only asked in OECD countries

About five million people become infected with HIV/AIDS each year. The goal is to stop the spread of HIV/AIDS.

V175: AMOUNT OF FOREIGN AID OF THIS COUNTRY

V175. In 2003, this country's government allocated [a tenth of one percent]* of the national income to foreign aid—that is, [\$US 38.05]** per person. Do you think this amount is too low, too high, or about right? (Code one answer):

NOTE: Only asked in OECD countries

* [Restate this figure using information for your country from the 1st table at the end of this document!]

** [Restate this figure using information for your country from the 2nd table at the end of this document!]

V179: WHO SHOULD DECIDE: INTERNATIONAL PEACEKEEPING

V179. Some people believe that certain kinds of problems could be better handled by the United Nations or regional organizations rather than by each national government separately. Others think that these problems should be left entirely to the national governments. I'm going to mention some problems. For each one, would you tell me whether you think that policies in this area should be decided by the national governments, by regional organizations, or by the United Nations? (Read out and code one answer for each problem):

V183: WHO SHOULD DECIDE: HUMAN RIGHTS

V183. Some people believe that certain kinds of problems could be better handled by the United Nations or regional organizations rather than by each national government separately. Others think that these problems should be left entirely to the national governments. I'm going to mention some problems. For each one, would you tell me whether you think that policies in this area should be decided by the national governments, by regional organizations, or by the United Nations? (Read out and code one answer for each problem):

V185: RELIGIOUS DENOMINATION

V185. Do you belong to a religion or religious denomination? If yes, which one? (Code answer due to list below. Code 0, if respondent answers to have no denomination!)

(NOTE: If your own society does not fit into this coding system, please devise an alternative, following this as closely as possible; for example, in Islamic countries, ask about Sunni, Shia, etc. Send a list of the categories used here along with your data.)

V245: NATURE OF TASKS: ROUTINE VS. CREATIVE

V245. Are the tasks you perform at work mostly routine tasks or mostly creative tasks? If you do not work currently, characterize your major work in the past. Use this scale where 1 means “mostly routine tasks” and 10 means “mostly creative tasks” (code one answer):

- 5 'Missing; Unknown'
- 4 'Not asked'
- 3 'Not applicable'
- 2 'No answer'
- 1 'Don´t know'
- 1 'Mostly routine tasks'
- 2 '2'
- 3 '3'
- 4 '4'
- 5 '5'
- 6 '6'
- 7 '7'
- 8 '8'
- 9 '9'
- 10 'Mostly not routine tasks'

V246: NATURE OF TASKS: INDEPENDENCE

V246. How much independence do you have in performing your tasks at work? If you do not work currently, characterize your major work in the past. Use this scale to indicate your degree of independence where 1 means “no independence at all” and 10 means “complete independence” (code one answer):

- 5 'Missing; Unknown'
- 4 'Not asked'
- 3 'Not applicable'
- 2 'No answer'
- 1 'Don´t know'
- 1 'No independence at all'
- 2 '2'
- 3 '3'
- 4 '4'
- 5 '5'
- 6 '6'
- 7 '7'
- 8 '8'
- 9 '9'
- 10 'Complete independence'

Y003: AUTONOMY INDEX

Auton-4 Index, which is defined with the following formula:

$$y003=(V19 + V21)-(V12 + V18)$$

Only questions with answers to the 4 items are considered.

The index ranges from -2 to +2.

-2 'Religious faith; Obedience'

-1 -1'

0 '0'

1 '1'

2 'Determination, perseverance/Independence'

*-3 'Not applicable'

*-4 'Not asked in survey'

*-5 'Missing; Unknown'
