Lecture 1: Introduction

Ernesto F. L. Amaral

August 25, 2022 Introduction to Sociological Data Analysis (SOCI 600)

Source: Healey, Joseph F. 2015. "Statistics: A Tool for Social Research." Stamford: Cengage Learning. 10th edition. Chapter 1 (pp. 1–22).

Outline

- Course objective
- Why study statistics?
 - Describe role of statistics in social research
- Types of variables
 - Causal relationships: independent, dependent
 - Unit of measurement: discrete, continuous
 - Level of measurement: nominal, ordinal, interval-ratio
- General classes of statistics
 - Univariate, bivariate, multivariate, inferential
- American Community Survey (ACS)
- Stata

Main objectives of this course

- Statistics are tools used to analyze data and answer research questions
- Our focus is on how these techniques are applied in the social sciences
- Be familiar with **advantages and limitations** of the more commonly used statistical techniques
- Know which techniques are appropriate for a given purpose
- Develop statistical and computational skills to carry out **elementary forms of data analysis**

Data, software, and techniques

- This course is an introduction to social statistics using data from the American Community Survey (ACS) and the statistical package Stata
- Univariate analysis
 - Mode, median, mean, boxplot
- Measure of association for nominal-level variables
 - Chi Square
- Measure of association for ordinal-level variables
 - Spearman's Rho
- Measures of association for interval-ratio-level variables
 - Scatterplots, Pearson's *r*, analysis of variance (ANOVA)
- Multivariate analysis
 - Ordinary least square regression (linear regression)

Why study statistics?

- Scientists conduct research to answer questions, examine ideas, and test theories
- Statistics are relevant for <u>quantitative research</u>
 <u>projects</u>: numbers and data used as information
- Statistics are mathematical techniques used by social scientists to analyze data in order to <u>answer questions and test theories</u>

Importance of data manipulation

Studies without statistics

- Some of the most important works in the social sciences do not utilize statistics
- There is nothing magical about data and statistics
- Presence of numbers guarantees nothing about the quality of a scientific inquiry

Studies with statistics

- Data can be the most trustworthy information available to the researcher
- Researchers must organize, evaluate, analyze data
- Without understanding of statistical analysis, researcher will be unable to make sense of data

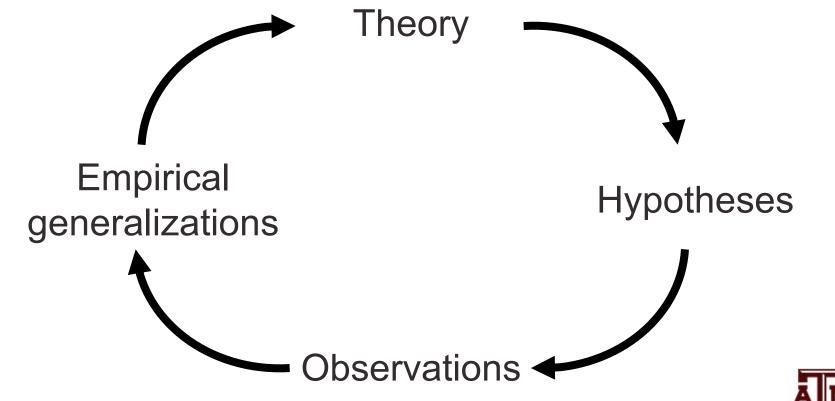

Statistics role in scientific inquiry

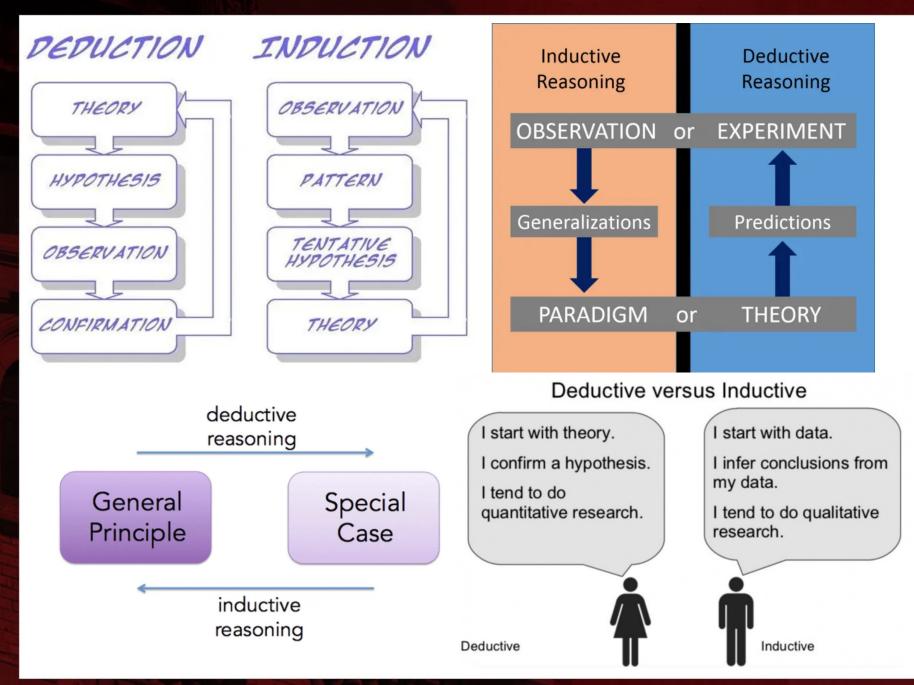

- **Research** is a disciplined inquiry to answer questions, examine ideas, and test theories
- **Statistics** are mathematical tools used to organize, summarize, and manipulate data
- Quantitative research collects and uses
 information in the form of numbers
- **Data** refers to information that is collected in the form of numbers

The wheel of science

 Scientific theory and research continually shape each other

Source: https://danielmiessler.com/blog/the-difference-between-deductive-and-inductive-reasoning/

Theory

- **Theory** is an explanation of the relationships among social phenomena
- Scientific theory is subject to a rigorous testing process
- Social theories are complex and abstract explanations about problems in society
 - They develop explanations about these issues

Hypotheses

- Since theories are often complex and abstract, we need to be specific to conduct a valid test
- Hypotheses are preliminary answers to research questions, based on theories
- Hypothesis is a specific and exact statement about the relationship between variables...

Variables and observations

Variables

- Characteristics that can change values from case to case
- E.g. gender, age, race/ethnicity, number of children, place of residence, income...

Observations (cases)

- Refer to the entity from which data are collected
- Also known as "unit of analysis"
- E.g. individuals, households, states, countries...

Variables

- Variable: a characteristic/phenomenon whose value varies (changes) from case to case, and is empirically quantifiable
- **Dependent variable:** a variable whose variation depends on another variable
- Independent variable: a variable whose variation produces ("causes") variation in another variable

Observations

- **Observations** (cases) are collected information used to test hypotheses
- Decide how variables will be measured and how cases will be selected and tested
- Measure social reality: collect numerical data
- Information can be organized in databases
 - Variables as columns
 - Observations as rows

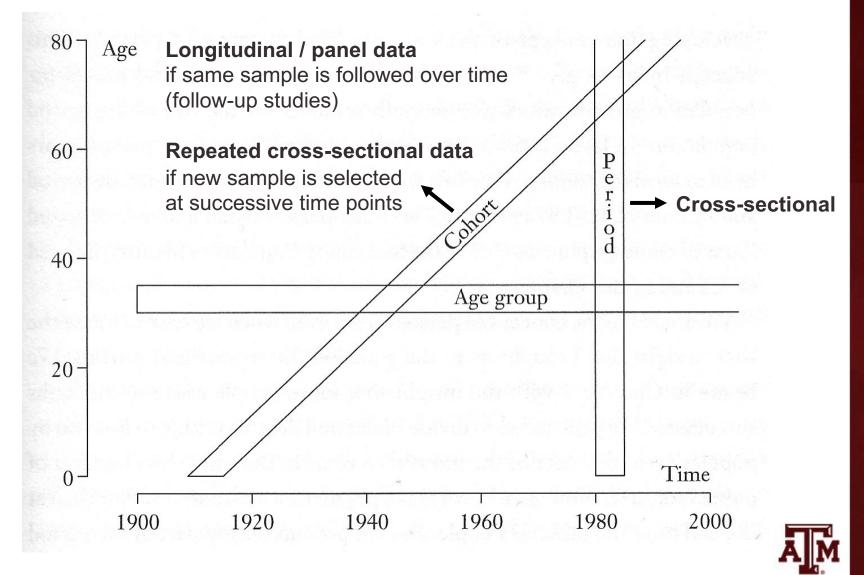

Example of a database

Observation	Salary per hour	Years of schooling	Years of experience in the labor market	Female	Marital status (married)
1	3.10	11	2	1	0
2	3.24	12	22	1	1
3	3.00	11	2	0	0
4	6.00	8	44	0	1
5	5.30	12	7	0	1
525	11.56	16	5	0	1
526	3.50	14	5	1	0

Lexis diagram

Empirical generalizations

- Empirical generalizations are conclusions based on the analysis of collected observations that evaluate hypotheses and assess theory
- As we developed tentative explanations, we would begin to revise or elaborate the theory that guides the research project
 - If we changed our theory because of our empirical generalizations, a new research project would be needed to test the revised theory
 - The wheel of science would begin to turn again

Statistical analysis

- Statistical analysis of data should be applied after successfully completing earlier phases
 - Rigorous conceptualization and use of theory
 - Well-defined research design and methods
 - Well-conceived research questions
- Review research literature to learn how to
 - Develop and clarify definitions
 - Understand social concepts
 - Develop questions and indicators to measure concepts

Theory and research

- In the normal course of science, we rarely are in a position to declare a **theory true or false**
 - Evidence will gradually accumulate over time
 - Ultimate judgments of truth will be the result of many years of research and debate
- Theory stimulates research and research shapes theory
 - This is the key to enhance our understanding of the social world
- Statistics is one of the most important links between theory and research

Types of variables

- Variables may be classified in different forms
- Causal relationships
 - Independent or dependent
- Unit of measurement
 - Discrete or continuous
- Level of measurement

 Nominal, ordinal, or interval-ratio

Causation

- Theories and hypotheses are often stated in terms of the **relationships between variables**
 - Causes: independent variables
 - Effects or results: dependent variables

У	y x	
Dependent variable	Independent variable	Econometrics
Explained variable	Explanatory variable	
Response variable	Control variable	Experimental science
Predicted variable	Predictor variable	
Outcome variable	Covariate	
Regressand	Regressor	

Correlation vs. causation

- Correlation and causation are different
 - Strong associations (correlation) may be used as evidence of causal relationships (causation)
 - Associations do not prove variables are causally related
- We might have problems of reverse causality
 - e.g., immigration increases competition in the labor market and affects earnings
 - Availability of jobs and income levels influence migration

Discrete or continuous

Discrete variables

- Have a basic unit of measurement that cannot be subdivided (whole numbers)
- Count number of units (e.g. people, cars, siblings) for each case (e.g. household, person)

Continuous variables

- Have scores that can be subdivided infinitely (fractional numbers)
- Report values as if continuous variables were discrete
- Statistics and graphs vary depending on whether variable is discrete or continuous

Level of measurement

- Level of measurement
 - Mathematical nature of the scores of a variable
 - It is crucial because statistical analysis must match the mathematical characteristics of variables
- Three levels of measurement
 - Nominal: scores are labels only, not numbers
 - Ordinal: scores have some numerical quality and can be ranked
 - Interval-ratio: scores are numbers

Nominal-level variables

- Have non-numerical scores or categories
 - Scores are different from each other, but cannot be treated as numbers (they are just labels)
 - Statistical analysis is limited to comparing relative sizes of categories

Variables	Gender	Political party preference	Religious preference
Categories	1 Male	e 1 Democrat 1 Protestant	
	2 Female	2 Republican	2 Catholic
		3 Other	3 Jew
		4 Independent	4 None
			5 Other

Criteria to measure variables

• Be mutually exclusive

- Each case must fit into one and only one category

• Be exhaustive

- There must be a category for every case
- Include elements that are homogenous
 - The cases in each category must be similar to each other

Measuring religious affiliation

- Scale A (not mutually exclusive)
 - Protestant and Episcopalian overlap
- Scale B (not exhaustive)

- Lacks no religion and other

- Scale C (not homogeneous)
 - Non-Protestant seems too broad

Scale A	Scale B	Scale C	Scale D	
Protestant	Protestant	Protestant	Protestant	
Episcopalian	Catholic	Non-Protestant	Catholic	
Catholic	Jew		Jew	
Jew			None	
None			Other	
Other				A

Ordinal-level variables

- Categories can be ranked from high to low
 - We can say that one case is higher or lower, more or less than another
- Scores have no absolute or objective meaning
 - Only represent position with respect to other scores
 - We can distinguish between high and low scores
 - But distance between scores cannot be described
 - Average is not permitted with ordinal-level variables

Examples: ordinal-level variables

- Attitude and opinion scales
 - Prejudice, alienation, political conservatism...
- Likert scale:
 - (1) strongly disagree; (2) disagree; (3) neither agree nor disagree; (4) agree; (5) strongly agree
- Into which of the following classes would you say you belong?

Score	Class
1	Lower class
2	Working class
3	Middle class
4	Upper class

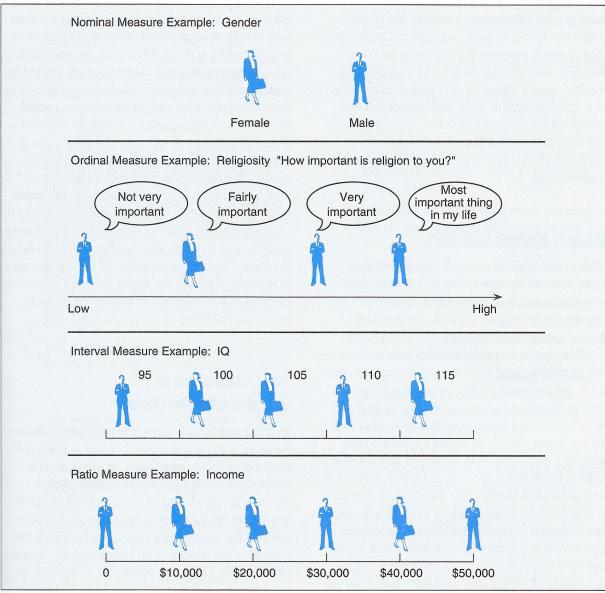

Interval-ratio-level variables

- Scores are actual numbers that can be analyzed with all possible statistical techniques
- Have equal intervals between scores
- Have true zero points
 - Score of zero is not arbitrary
 - It indicates absence of whatever is being measured
- Examples:
 - Age (in years)
 - Income (in dollars)
 - Year of education
 - Number of children

Examples

Source: Babbie 2001, p.137.

Importance

- Level of measurement of a variable is crucial
 It tells us which statistics are appropriate and useful
- Different statistics require different mathematical operations
 - Ranking, addition, square root...
- The first step in dealing with a variable and selecting appropriate statistics is to determine its level of measurement

Determine level of measurement

- Change the order of the scores. Do they still make sense?
 - If yes: the variable is **nominal**
 - If no: proceed to the next step
- Is the distance between the scores unequal?
 - If yes: the variable is **ordinal**
 - If no: the variable is **interval-ratio**

Nominal- and ordinal-level

 Nominal-level (e.g. marital status) and ordinal-level (e.g. capital punishment support) variables are almost always discrete

What is your marital status? Are you presently:		Do you support the death penalty for persons convicted of homicide?	
Score	Category	Score	Category
1	Married	1	Strongly support
2	Divorced	2	Somewhat support
3	Separated	3	Neither support nor oppose
4	Widowed	4	Somewhat oppose
5	Single	5	Strongly oppose

Income at the ordinal level

- Always examine the way in which the scores of the variable are actually stated
 - Be careful to look at the way in which the variable is measured before defining its level of measurement
- This is a problem with interval-ratio variables that have been measured at the ordinal level

Score	Income range
1	Less than \$24,999
2	\$25,000 to \$49,999
3	\$50,000 to \$99,999
4	\$100,000 or more

Variables' level of measurement

Variables' level of measurement	Examples of variables	Measurement procedures	Mathematical operations permitted	Examples of available techniques			
Nominal	 Gender Race/ethnicity Religion Marital status 	 Classification into categories <u>Mode</u> 	 Counting number in each category (tabulation) Comparing sizes of categories 	 Chi Square Logistic regression Multinomial logistic regression 			
Ordinal	 Social class Attitude scales Opinion scales 	 All of the above Plus ranking of categories with respect to each other (scale) Mode, median 	 All of the above Plus judgments of "greater than" and "less than" 	 Spearman's Rho Ordered logistic regression 			
Interval- ratio	– Age – Number of children – Income	 All of the above Plus description of scores in terms of equal units Mode, median, <u>mean</u> 	 All of the above Plus mathematical operations (addition, subtraction, multiplication, division, square roots) 	 Scatterplots Pearson's r Analysis of variance (ANOVA) Ordinary least square regression (linear regression) 			

General classes of statistics

- Two main types of statistical techniques are available to analyze data and answer questions
- Descriptive statistics
- Inferential statistics

Descriptive statistics

- Univariate descriptive statistics
 - Summarize or describe the distribution of a single variable
- **Bivariate** descriptive statistics
 - Describe the relationship between two variables
- Multivariate descriptive statistics
 - Describe the relationship among three or more variables

Univariate descriptive statistics

Univariate descriptive statistics

- Include percentages, averages, and graphs
- Data reduction: few numbers summarize many

• U.S. population by age groups, 2010

Age group	Percent
Under 18 years	24.0
18 to 44 years	36.6
45 to 64 years	26.4
65+ years	13.0
Total (N)	308,745,538

Bivariate descriptive statistics

Bivariate descriptive statistics

- Describe the strength and direction of the relationship between two variables
- Measures of association: quantify the strength and direction of a relationship
- Allow us to investigate causation and prediction
- E.g. relationship between study time and grade
 - Strength: closely related
 - Direction: as one increases, the other also increases
 - Prediction: the longer the study time, the higher the grade

Multivariate descriptive statistics

- Multivariate descriptive statistics
 - Describe the relationships between three or more variables
 - Measures of association: quantify the strength and direction of a multivariate relationship

• E.g. grade, age, gender

- Strength: relationship between age and grade is strong for women, but weak for men
- Direction: grades increase with age only for females
- Prediction: older females will experience higher grades than younger females. Older males will have similar grades to younger males.

Inferential statistics

- Social scientists need inferential statistics
 - They almost never have the resources or time to collect data from every case in a population
- Inferential statistics uses data from samples to make generalizations about populations
 - Population is the total collection of all cases in which the researcher is interested
 - Samples are carefully chosen subsets of the population
- With proper techniques, generalizations based on samples can represent populations

Public-opinion polls

- **Public-opinion polls** and election projections are a familiar application of inferential statistics
 - Several thousand carefully selected voters are interviewed about their voting intentions
 - This information is used to estimate the intentions of all voters (millions of people)
- E.g. public-opinion poll reports that 42% of voters plans to vote for a certain candidate
 - 2,000 respondents are used to generalize to the American electorate population (130 million people)

IPUMS

- Integrated Public Use Microdata Series (<u>https://ipums.org</u>)
 - Provides census and survey data from around the world integrated across time and space
 - Minnesota Population Center (<u>https://www.pop.umn.edu</u>)
 - Steven Ruggles (<u>http://users.hist.umn.edu/~ruggles</u>)
- IPUMS USA provides access to over 60 integrated, highprecision samples of the American population
 - Federal censuses
 - American Community Survey (ACS): 2000-present
 - Puerto Rican Community Survey (PRCS): 2005-present
 - Assigns uniform codes across all the samples and brings relevant documentation into a coherent form to facilitate analysis of social and economic change

2010 Decennial Census

- The 2010 Decennial Census consisted of a single short-form questionnaire
 - The short form asked age, sex, race, ethnicity, relationship to household head, and whether the housing unit was rented or owned by a member of the household
- The annual ACS survey was designed to replace the Census long-form questionnaire
 - The ACS/PRCS sample design approximates the Census 2000 long-form sample design and oversamples areas with smaller populations

Source: https://usa.ipums.org/usa/chapter2/chapter2.shtml

American Community Survey

- ACS and PRCS samples include about 3 million households nationwide
 - The sampling unit is the household and all persons residing in the household
- IPUMS samples of ACS and PRCS come from the Census Bureau's larger internal data files
 - They are subject to additional sampling error and further data processing (e.g., imputation, allocation)
 - Estimates from ACS IPUMS may not be consistent with ACS summary tables

Confidentiality measures

- Measures to protect individual confidentiality in ACS public available data
 - Individual variables, such as income and housing values are top coded
 - Geographic identifiers are currently restricted to the state and PUMA levels
- Public use microdata area (PUMA)
 - Consist of 100,000+ residents
 - Do not cross state lines
 - Codes must be combined with state codes
 - 2,101 PUMAs in the 2005-2011 ACS
 - 2,378 PUMAs in the 2012-2019 ACS

U.S. DEPARTMENT OF COMMERCE Economics and Statistics Administration U.S. CENSUS BUREAU

THE AMARIAN CONTRACTOR OF THE AMARINA CONTRA

Respond online today at: https://respond.census.gov/acs OR Complete this form and mail it back as soon as possible.

This form asks for information about the people who are living or staying at the address on the mailing label and about the house, apartment, or mobile home located at the address on the mailing label

If you need help or have questions about completing this form, please call 1-800-354-7271. The telephone call is free.

Telephone Device for the Deaf (TDD): Call 1–800–582–8330. The telephone call is free.

¿NECESITA AYUDA? Si usted habla español y necesita ayuda para completar su cuestionario, llame sin cargo alguno al **1-877-833-5625**. Usted también puede completar su entrevista por teléfono con un entrevistador que habla español. O puede responder por Internet en: https://respond.census.gov/acs

For more information about the American Community Survey, visit our web site at: http://www.census.gov/acs

Please print the name and telephone number of the person who is filing out this form. We will only contact you if needed for official Census Bureau business. Last Name

Please print today's date.

Day

Year

Month

Area Code + Number

How many people are living or staying at this address?

- INCLUDE everyone who is living or staying here for more than 2 months.
- INCLUDE yourself if you are living here for more than 2 months.
- INCLUDE anyone else staying here who does not have another place to
- stay, even if they are here for 2 months or less. **DO NOT INCLUDE** anyone who is living somewhere else for more than 2 months, such as a college student living away or someone in the Armed Forces on deployment.

Number of people

Fill out pages 2, 3, and 4 for everyone, including yourself, who is living or staying at this address for more than 2 months. Then complete the rest of the form.

FORM ACS-1(INFO)(2017) (03-14-2016) OMB No. 0607-0810 OMB No. 0607-0936

MI

13197082

	Person 1 Person 1 is the person living or staying here in whose name this house or apartment is owned, being bought, or rented. If there is no such beerson, start with the name of any adult living or staying here.)	Please copy the name of Person 1 from page 2, then continue answering questions below. 1) What is the highest degree or level of school this person has COMPLETED? Mark (X) ONE box. If currently enrolled, mark the previous grade or highest degree received. 13 What is this person's ancestry or ethnic origin? Last Name No Schooling completed No schooling completed If or example: Italian, Jamaican, African Am., Cambodian, Cape Verdean, Norwegian, Dominican, French Canadian, Haitian, Korean, Lebanese, Polish, Nigerian, Mexican, Taiwanan, and so on First Name MI
	What is Person 1's name? .ast Name (Please print) First Name Multiple How is this person related to Person 1?	Where was this person born? Grade 1 through 11 - Specify grade 1 - 11 Yes In the United States - Print name of state. No → SKIP to question 15a b. What is this language?
I	X Person 1 What is Person 1's sex? Mark (X) ONE box.	Outside the United States – Print name of foreign country, or Puerto Rico, Guam, etc. Ith grade – NO DIPLOMA HIGH SCHOOL GRADUATE For example: Korean, Italian, Spanish, Vietnamese
T		Is this person a citizen of the United States? GED or alternative credential c. How well does this person speak English? Yes, born in the United States → SKIP to question 10a GED or alternative credential UVery well Yes, born in Puerto Rico, Guam, the U.S. Virgin Islands, or Northern Marianas Some college credit, but less than 1 year off college credit. Well Yes, born abroad of U.S. citizen parent 1 or more years of college and the dama Not well
	NOTE: Please answer BOTH Question 5 about Hispanic origin and Question 6 about race. For this survey, Hispanic origins are not races. s Person 1 of Hispanic, Latino, or Spanish origin? No, not of Hispanic, Latino, or Spanish origin	 or parents Yes, U.S. citizen by naturalization - Print year No, not a U.S. citizen No, not a U.S. citizen Index years of college citalit, in degree Index years of college citalit, in degree Associate's degree (for example: AA, AS) Bachelor's degree (for example: BA, BS) AFTER BACHELOR'S DEGREE Master's degree (for example: MA, MS, MEng, Med, MSW-MBA) Person is under 1 year old → SKIP to question 16
	 Yes, Mexican, Mexican Am., Chicano Yes, Puerto Rican Yes, Cuban Yes, another Hispanic, Latino, or Spanish origin – Print origin, for example, Argentinean, Colombian, Dominican, Nicaraguan, Salvadoran, Spaniard, and so on. ∠ 	When did this person come to live in the United States? If this person came to live in the United States? If this person came to live in the United States more than once, print latest year. Year Professional degree beyond a bachelor's degree (for example: MD, DDS, DVM, LLB, JD) Yes, this house → SKIP to question 16 Doctorate degree (for example: MD, DDS, DVM, LLB, JD) Doctorate degree (for example: PhD, EdD) No, outside the United States and Puerto Rico - Print name of foreign country or U.S. Virgin Islands, Guam, etc., below; then SKIP to question 16
6	Nhat is Person 1's race? Mark (X) one or more boxes.	 A t any time IN THE LAST 3 MONTHS, has this person attended school or college? Include only nursery or preschool, kindergarten, elementary school, home school, and schooling which leads to a high school diploma or a college degree. B Answer question 12 if this person has a bachelor's degree or higher. Otherwise, SKIP to question 13. B Answer question 12 if this person has a bachelor's degree or higher. Otherwise, SKIP to question 13. B A B B B B B B B B B B
	Black or African Am. American Indian or Alaska Native — Print name of enrolled or principal tribe.	 No, has not attended in the last 3 months → SKIP to question 11 Yes, public school, public college Yes, private school, private college, home school
	Asian Indian Japanese Native Hawaiian Chinese Korean Guamanian or Chamorro Filipino Vietnamese Samoan	b. What grade or level was this person attending? engineering, elementary teacher education, organizational psychology) Name of city, town, or post office Mark (X) ONE box. organizational psychology) Name of city, town, or post office Kindergarten Name of U.S. county or
	Other Asian – Print race, Other Pacific Islander – for example, Hmong, Print race, for example, Laotian, Thai, Pakistani, Fijian, Tongan, and Cambodian, and so on. ₹ so on. ₹	Grade 1 through 12 – Specify
	Some other race – Print race. 🗾	College undergraduate years (freshman to senior) Name of U.S. state or Puerto Rico ZIP Code Graduate or professional school beyond a bachelor's degree (for example: MA or PhD program, or medical or law school) Data

		13197058
 Which best describes this building? Include all apartments, flats, etc., even if vacant. A mobile home A one-family house detached from any other house A one-family house attached to one or more houses A building with 2 apartments A building with 3 or 4 apartments A building with 5 to 9 apartments A building with 10 to 19 apartments 	 Answer questions 4 - 5 if this is a HOUSE OR A MOBILE HOME; otherwise, SKIP to question 6a. How many acres is this house or mobile home on? Less than 1 acre → SKIP to question 6a 1 to 9.9 acres 10 or more acres 	 Does this house, apartment, or mobile home have- a. hot and cold running water? b. a bathub or shower? c. a sink with a faucet? d. a stove or range? e. a refrigerator? f. telephone service from which you can both make and receive calls? <i>Include</i> a to this house, apartment, or mobile home - do you or any member of this household 3 At this house, apartment, or mobile home - do you or any member of this household a besktop or laptop b. Smartphone c. Tablet or other portable
 A building with 20 to 49 apartments A building with 50 or more apartments Boat, RV, van, etc. 	 \$2,500 to \$4,999 \$5,000 to \$9,999 \$10,000 or more 	c. Tablet or other portable Gas: from underground pipes serving the neighborhood d. Some other type of computer Gas: bottled, tank, or LP Specify Z Electricity Fuel oil, kerosene, etc. Fuel oil, kerosene, etc.
 About when was this building first built? 2000 or later - Specify year 1990 to 1999 1980 to 1989 1970 to 1979 	 a. How many separate rooms are in this house, apartment, or mobile home? Rooms must be separated by built-in archways of walls that extend out at least 6 inches and go from floor to ceiling. INCLUDE bedrooms, kitchens, etc. EXCLUDE bathrooms, porches, balconies, toyers, halls, or unfinished basements. Number of rooms 	 At this house, apartment, or mobile home - do you or any member of this household have access to the Internet? Yes, by paying a cell phone company or Internet service provider Yes, without paying a cell phone company or Internet service provider → SKIP to question 11 No access to the Internet at this house, apartment, or mobile home → SKIP to question 11
 1960 to 1969 1950 to 1959 1940 to 1949 1939 or earlier When did PERSON 1 (listed on page 2) move into this house, apartment, or mobile home? Month Year 	b. How many of these rooms are bedrooms? Count as bedrooms those rooms you would list if this house, apartment, or mobile home were for sale or rent. If this is an efficiency/studio apartment, print "0". Number of bedrooms	Do you or any member of this household have access to the Internet using a - Yes No S. cellular data plan for a smartphone or other mobile device? b. broadband (high speed) Internet service such as cable, fiber optic, or DSL service installed in this household? c. satellite Internet service installed in this household? d. diat-up Internet service installed in this household? d. some other service? Specify service z

Stata

- Stata is a software package that provides tools for data manipulation, visualization, and estimation of various statistics
- Stata programming language is easier to understand than other statistical software packages (SPSS, SAS, R)
- Stata is popular across various social sciences, such as sociology, demography, and economics
- See more information on

https://www.stata.com/why-use-stata/

Popularity of statistical software

- Bob Muenchen has been tracking popularity of data science software using a variety of different approaches
 - E.g., he uses Google Scholar to count the number of scholarly articles found each year for each software

https://r4stats.com/articles/popularity/

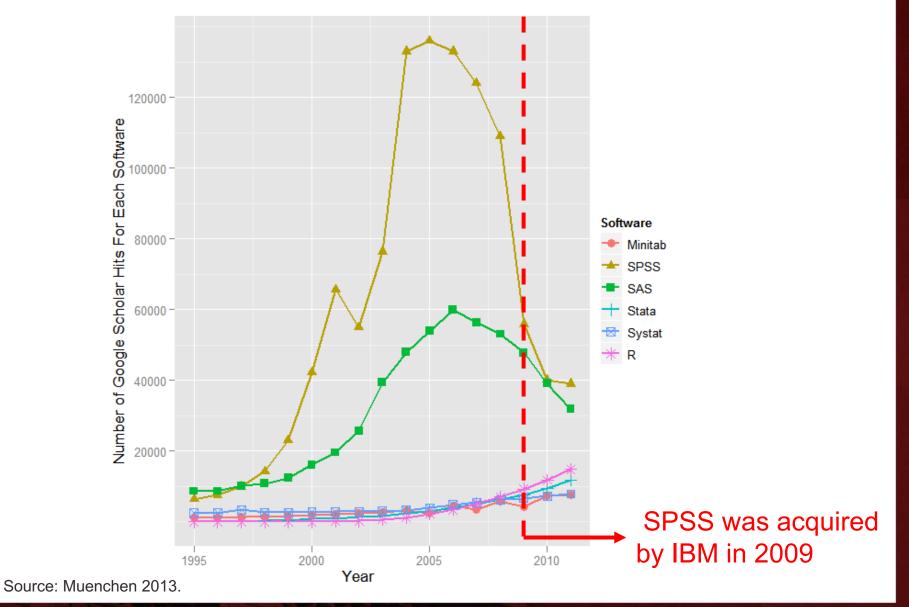

- Forecast Update: Will 2014 be the Beginning of the End for SAS and SPSS?
 - May 14, 2013, by Bob Muenchen

https://www.r-bloggers.com/forecast-update-will-2014-be-the-beginning-of-theend-for-sas-and-spss/

- Is Scholarly Use of R Use Beating SPSS Already?
 - July 15, 2019, by Bob Muenchen

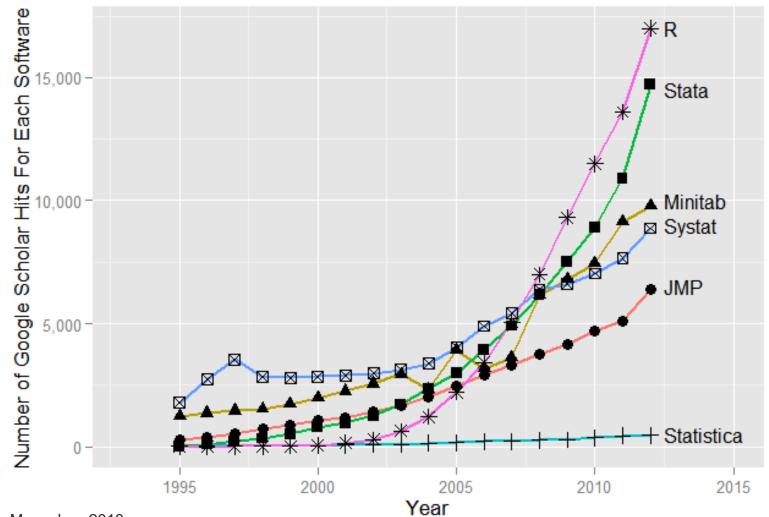

https://www.r-bloggers.com/is-scholarly-use-of-r-use-beating-spss-already/

Scholarly use of data analysis software

Site: https://www.r-bloggers.com/forecast-update-will-2014-be-the-beginning-of-the-end-for-sas-and-spss/

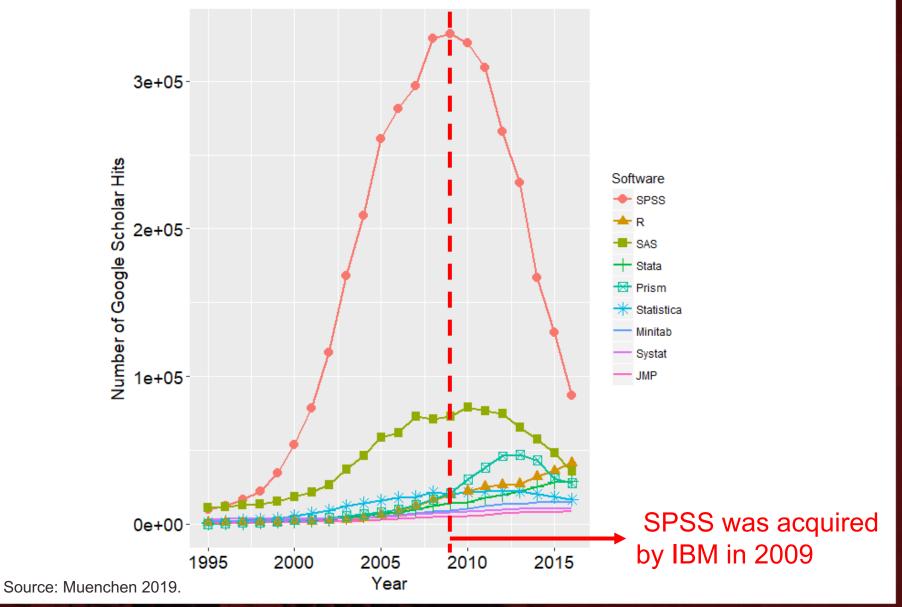

Scholarly use of data analysis software, SAS and SPSS removed

Source: Muenchen 2013.

Site: https://www.r-bloggers.com/forecast-update-will-2014-be-the-beginning-of-the-end-for-sas-and-spss/

Citations per year for each software

Site: https://www.r-bloggers.com/is-scholarly-use-of-r-use-beating-spss-already/

Age-period-cohort effects

• Why most young demographers use R?

• Age effect

- "You know, young people love free stuff and visualizations, they will grow up soon and will pay for Stata or SAS"
- Period effect
 - "I think it is because it is trendy nowadays, before everybody used Stata, later everybody will use Python"

Cohort effect

 "Maybe is because they learned R at the beginning of their carrier, and they will continue to use it for a long time"

Source: Acosta, Enrique. 2020. "Age-period-cohort analysis: Limitations and possibilities." Presentation at the 11th Demographic Conference of Young Demographers. February, 6.

R vs. Stata

- R is a free software package
 - The most advanced statistical models and techniques are made available quickly in R
 - Researchers, professors, and other professionals create extra commands for R with new methodological advances
 - The same happens for Stata, but not in the same pace
- Among our faculty, Stata is more popular

Stata licenses

 Instructions for accessing Stata through the Texas A&M Virtual Open Access Lab (VOAL)

> http://www.ernestoamaral.com/docs/soci420-22fall/Stata_VOAL_instructions.pdf

Student short-term Stata license (free for a maximum of one week)

https://www.stata.com/customer-service/short-term-license

 Student Single-User Stata License (lower prices) https://www.stata.com/order/new/edu/gradplans/student-pricing
